Professional Summary

Full-stack developer and applied ML engineer with experience building AI-powered applications using React, Python, and LangChain. Skilled in end-to-end machine learning pipelines, real-time multimodal systems, and cloud deployment. Passionate about combining modern frontend engineering with intelligent backend systems to deliver scalable, production-ready products.

Technical Skills

Languages & Development: JavaScript, TypeScript, Python, C, HTML/CSS

Frameworks & Libraries: React.js, Next.js, Node.js, Express.js, Tailwind CSS, Electron, LangChain, LangGraph

AI & Machine Learning: Scikit-learn, Pandas, NumPy, Machine Learning, NLP, Prompt Engineering, Gemini API

Databases & ORM: PostgreSQL, Prisma, SQL

Cloud, DevOps & Tools: Docker, Kubernetes, AWS, Git, GitHub, CI/CD, Linux/Bash, Agile/Scrum

Experience

Uplyx Solutions | Applied ML Intern

Dec 2025 – Feb 2026

- Engineered an AI-powered real estate price prediction system in Python, achieving 91% R^2 accuracy on a 10,000+ record synthetic dataset.
- Designed and trained predictive ML models using Scikit-learn, reducing mean absolute error by ~22% through iterative feature engineering.
- Optimized preprocessing and model evaluation pipelines with Pandas and NumPy, cutting data processing runtime by 35%.

NPIT | Intern

Jun 2023 – Aug 2023

- Built 5+ responsive web interfaces using JavaScript, HTML, and CSS, improving mobile layout consistency across target browsers.
- Implemented Git branching strategies and GitHub workflows, reducing merge conflicts by 40% across the team codebase.
- Integrated CI/CD concepts into deployment processes, shortening release cycle review time by approximately 20%.

Projects

Edith The AI Voice Assistant | Personal Project | [GitHub](#)

- Engineered a multimodal AI assistant powered by Google Gemini Live API with real-time voice, vision, gesture, and autonomous system interaction, achieving sub-200ms average voice response latency.
- Integrated Face ID authentication, gesture-controlled spatial UI, persistent memory, and AI-powered workflow automation — reducing manual task steps by ~60% in demo scenarios.

Real Estate Price Prediction System | Internship Project | [GitHub](#)

- Designed an end-to-end ML pipeline delivering strong predictive performance with 18% lower RMSE vs. a baseline linear model.
- Built a modular synthetic data engine generating a large-scale dataset with non-linear relationships, feature dependencies, and realistic market variation for robust model training.

Naxshtra AI | Personal Frontend Project

- Developed a next-generation high-performance website using React, TypeScript, Vite, Tailwind CSS, and shadcn/ui, reducing UI development time by ~30% and achieving a 98/100 Lighthouse performance score on deployment.

Education

Bachelor of Technology | Parul University (CGPA 7.56)

Jun 2024 – Jun 2027 (Expected)

Diploma in Computer Science Engineering | Government Polytechnic Nandurbar (82.17%)

Jun 2021 – Jun 2024
